

CLIMB, AIM, AND SHOOT.

Replace traditional antenna-height measurement tools with TruPulse® laser rangefinders.

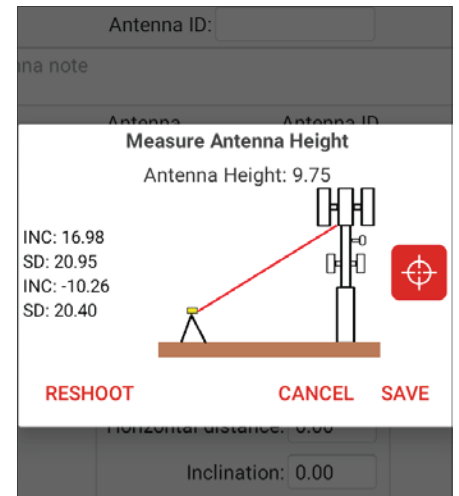

Flexible and reliable measurement routines make it easier than ever to capture distances from the tower or the ground, in environments and conditions off all kinds.

KEY FEATURES

- Generate Reports in PDF, TXT, CSV, GPX and KML file formats for data processing
- Collect accurate rad center height values every time
- All data is time-stamped and digitally recorded for authenticity and verification purposes
- Streamlined Laser and GPS connection screens
- Data recorded by TruPulse laser rangefinders instantly auto-populate your custom data fields
- Record tower numbers, GPS locations, antenna types and carriers, and the all-important height values

The LaserSoft Tape Drop app is available for free with lifetime support included.

NEVER WRESTLE WITH THAT 300-FOOT TAPE IN THE WIND AGAIN!

[Download this free app for use with your Bluetooth enabled TruPulse laser](#)
